

Week X: (Thur to Wed)

Thursday: Presented the proposal

Friday: Updated the Gantt chart for this semester with mobile app items. Started planning out timelines for work items.

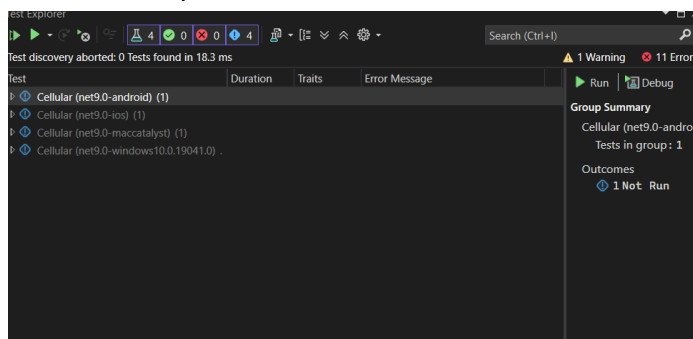

Saturday: I am still working on my shot page refactoring. I realized that unit tests would be very helpful here. XXX and I never got around to adding tests last semester.

Sunday: Did not work on the project

Monday: Read through the .NET MAUI page for how to set up unit tests. Created a new branch in the cellular repo for this. I started working on implementing the unit tests. It requires adding the xunit package to our solution.

Tuesday:

I continued working on unit test functionality. I also needed to add the xunit.runner.visualstudio version 3.1.4 and [Microsoft.NET.Test.SDK](#) version 17.14.1. Ran into a new issue where it would see the example test but couldn't run it due to an error between android,ios,windows, and mac.

Wednesday: Did not work on the project. Busy with other classes/ having Covid.

Summary for Weekly Status Report (discuss during weekly presentation):

1) Self-Assessment (0-5) 4

2) Team accomplishments: I know the mobile/watch team has a much better idea of what's happening for this semester. I'm not sure what's going on with the physical team though.

3) Your accomplishments: I have a much nicer/organized plan for the project! I mainly spent most of my time trying to get Unit tests to work for the mobile app. This will help with my shot page refactoring. I made good progress but still have an issue left to solve.

4) Challenges, approaches, outcomes: I ran into a few challenges with the unit tests. I

needed to add a few nuget packages to be able to even create tests. Now I can see tests but when I go to run them, visual studio is getting confused by cross platform. It says "Program has more than one entry point defined. Compile with /main to specify the type that contains the entry point".

5) Next week's goals: Finish unit tests and use cases document.

6) GitHub links for your major commits for week: No commits yet. Did make a new branch for the unit tests.
